Final

Each nA should plan after the flood to put into a final report within the timeframe specified by the authority. The authority should compile this report which will be used to a) provide feedback and identify the areas for improvement and b) to help the authority to identify the impact of the flood on the population and to identify the areas for improvement in the future.

	nA	M	A	P	MP	A
1. Introduction	The following is a final report of the activities carried out by the nA in response to the flood. This report is intended to provide a summary of the activities carried out and to identify the areas for improvement.					
2. Objectives	The objectives of this report are to provide a summary of the activities carried out and to identify the areas for improvement.					
3. Methodology	The methodology used in this report is a combination of interviews, focus groups, and document analysis.					
4. Results	The results of the activities carried out are as follows:					
5. Conclusions	The conclusions drawn from the activities carried out are as follows:					
6. Recommendations	The recommendations made in this report are as follows:					
7. References	The references cited in this report are as follows:					
8. Appendix	The appendix contains the following information:					
9. Glossary	The glossary defines the following terms:					
10. Acknowledgements	The acknowledgements are as follows:					
11. Contact Information	The contact information for the nA is as follows:					
12. Signatures	The signatures of the nA and the authority are as follows:					

The Team Leader must sign the document

nA Team

An nA team should be established in the flood area. The team should be composed of representatives from the nA, the authority, and the community. The team should be responsible for the following activities:

Each team should be responsible for the following activities:

- a support unit

Management

The manager should ensure that the approach is a coordinated effort that allows for a multi-agency approach to the management of the flood risk. A multi-agency approach is necessary to ensure that the flood risk is managed in a coordinated manner.

At the local level, the health department should be responsible for the management of the flood risk.

At the national level, the health department should coordinate with other government agencies, including the police and the fire department, to ensure a coordinated response.

The health department should also coordinate with the private sector, including hospitals and health centers, to ensure that they are prepared for a flood event.

The health department should also coordinate with the media to ensure that the public is kept informed of the flood risk and the actions being taken to manage it.

The health department should also coordinate with the insurance industry to ensure that they are prepared to provide compensation to those affected by a flood event.

Assessment

The assessment should include a risk assessment that can be used to identify the areas most at risk of flooding and the potential impact of a flood event on the population.

The assessment should also include a capacity assessment to identify the strengths and weaknesses of the health department in managing a flood event.

The assessment should be completed within a period of 10 working days.

- **A water and sanitation expert**

The water and sanitation expert should assess the current status of the water and sanitation infrastructure in the area and identify any gaps in service. The expert should also assess the potential impact of a flood event on the water and sanitation infrastructure and identify measures that can be taken to reduce the risk.

- **A food safety and hygiene expert**

The food safety and hygiene expert should assess the current status of the food and hygiene infrastructure in the area and identify any gaps in service. The expert should also assess the potential impact of a flood event on the food and hygiene infrastructure and identify measures that can be taken to reduce the risk.

- **A vector and rodent control expert**

The vector and rodent control expert should assess the current status of the vector and rodent control infrastructure in the area and identify any gaps in service. The expert should also assess the potential impact of a flood event on the vector and rodent control infrastructure and identify measures that can be taken to reduce the risk.

future, the functional identification of the facility is:

- **A hazardous materials expert**

The hazardous material pertains to hazardous material in a facility and the potential for impact on the public in the flood area. He/she identifies the type of hazard, the contamination that can be caused and the functional identification of the facility is:

- **Logistician**

The logistician determines the facility's suitability for the provision of food, health and sanitation facilities for the population in addition to the amount of life support facilities available with limited capacity. Logistician's total available to clean up operations.

- **A public health doctor, medical/epidemiological expert**

The medical professional will identify health care infrastructure and capacity, determine the epidemiological situation with an epidemiological suitability for future health care. A microbiological surveillance system for affected population.

Environmental Health Rapid Needs Assessment

Human Health		
A facility available for analysis of flood damage	<input type="checkbox"/>	<input type="checkbox"/>
If no facility available, please provide details: _____		

Is a food supply source of flood damage	<input type="checkbox"/>	<input type="checkbox"/>
If so, is the supply source contaminated in the flood?	<input type="checkbox"/>	<input type="checkbox"/>
If no indication of contamination, please provide details: _____		

Are there water supply of cleaning products and apparatus	<input type="checkbox"/>	<input type="checkbox"/>
If no indication of contamination, please provide details: _____		

Non-human Health		
Is there a risk of biological contamination of fish in the water?	<input type="checkbox"/>	<input type="checkbox"/>
Is there a risk of chemical contamination in fish in the water?	<input type="checkbox"/>	<input type="checkbox"/>
Is there a risk of contamination of shellfish?	<input type="checkbox"/>	<input type="checkbox"/>
